## ACADEMIC PROJECTS

➤ **MARKS INSERT, UPDATE, DELETE SYSTEM WITH PERSONAL INFO PAGE**

In this project, I implemented the concept of PHP, HTML, CSS, Bootstrap, and MySQL. In this, the home page is a personal information page that is designed using HTML, CSS, Bootstrap. On that page, you can find the next button. When you click that button, you will directly go to the student's marks table. In that table, you can insert, edit, and delete the entries. This is implemented using PHP and MySQL.

➤ **Skin Disease Prediction System using Flask Framework (Running)**

This is a group project. In this, I implemented Registration, login system using FLASK web framework. This project will take image from user and predict the disease using mobilenet model. My work is to handle web application part.

➤ **Vehicle Information System web (During BE – 6th Sem)**

In this project I designed web page in wordpress through that user can see all details of the vehicles online directly. Through this webpage, User can search vehicles by their recommendation.
